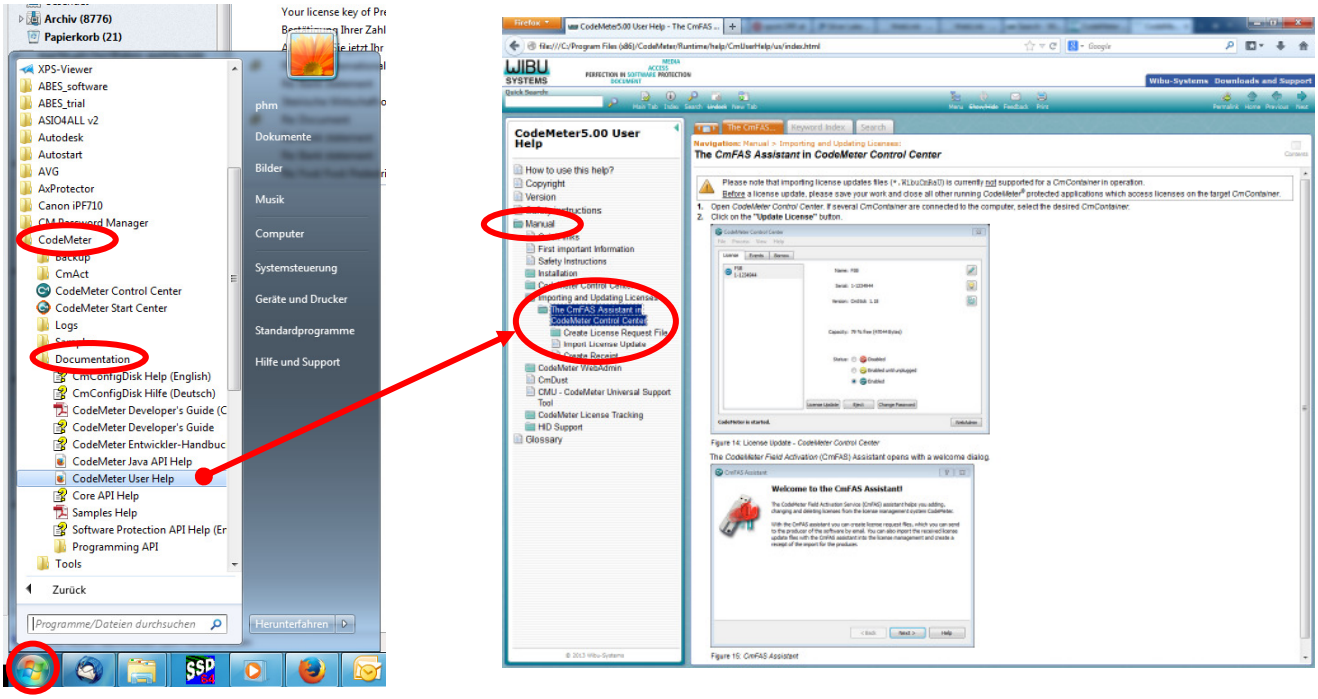
Codemeter License Update

The dongle containing project-specific licenses for ABES geoDes and ABES geoCon is called Codemeter and is produced by WIBU Systems.

In order to update or modify licenses on an existing Codemeter a file must be generated and sent to office@abes-austria.com by e-mail. We will use the information contained in this file and update the licenses as agreed with our clients. An updated file containing the modifications will be sent back. This updated file can be imported onto the Codemeter.

Please follow instructions contained in the Codemeter documentation to generate the license file. Codemeter documentation can be accessed by clicking on <Start> → <Codemeter> → <Documentation> → <CodeMeter User Help> on your computer (see screenshot below for details).


This should launch the CodeMeter User Help file in a web browser. Navigate to <Manual> → <Importing and Updating Licenses> and follow instructions to create or import a license file.
